

## User manual - Krogkollen

### Installation:

To install the application you need to download the .apk file from our dropbox on the following link:

<https://db.tt/eVA0UwoY>

After the download has finished you install it by clicking on the file and accepting the terms of usage. To do this you need to have checked the option “Unknown sources” in the security section in Settings.

*Unknown sources option marked out in red.*

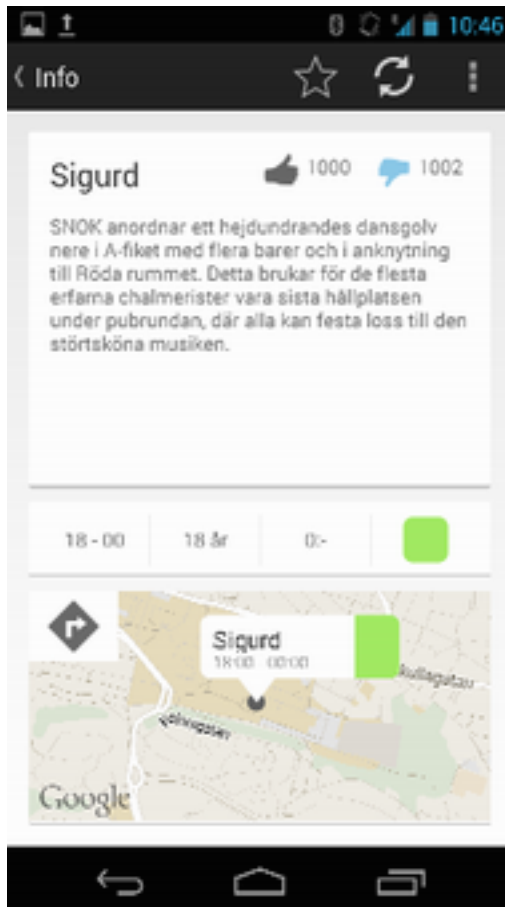

**Usage:**

The first view you will get to when you start the app is the map. Here you will see different pubs marked and the color indicates whether or not there is a long queue to get in. Red represents 45+ min, yellow 15-30min and green 15min waiting time. From here you can click on one of the markers and you will get to see more info about the pub.

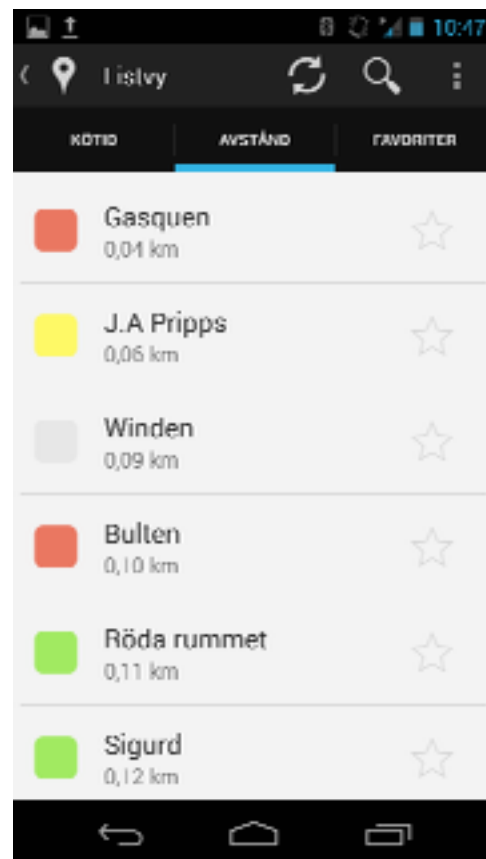

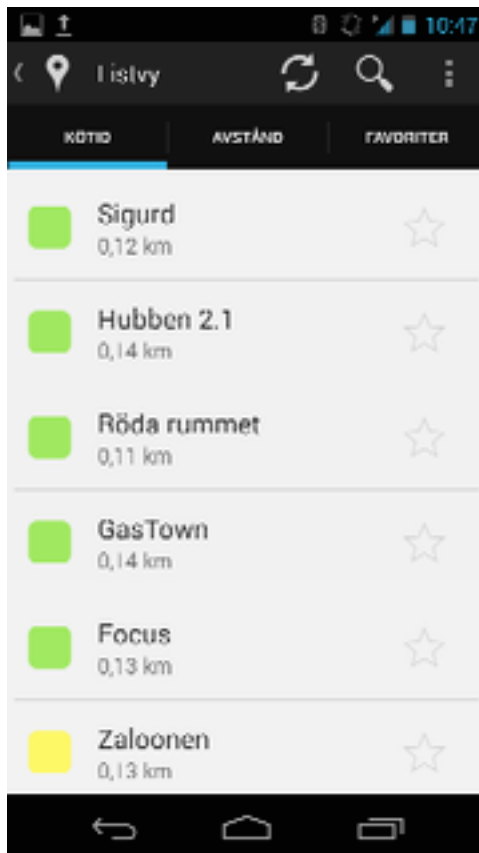

*By sliding down on the screen with two fingers you can alter the view so you can see "further".*

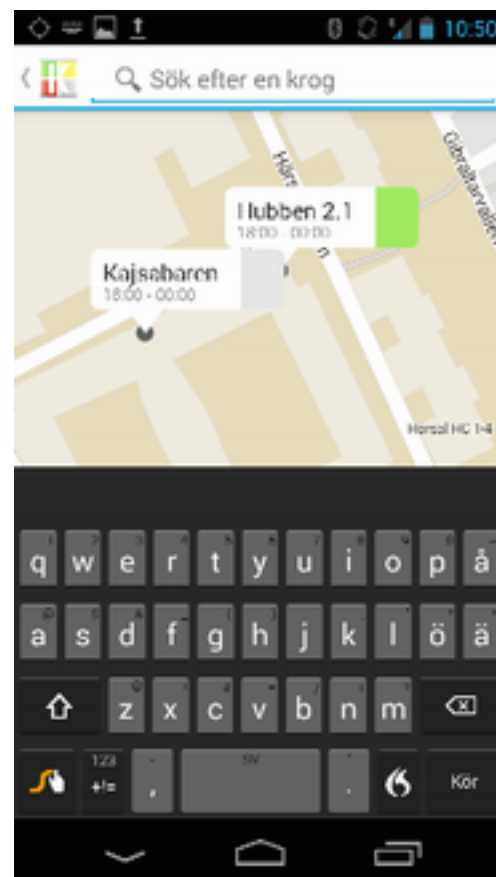

When you click on one of the markers you will get to this view. Here you will be able to mark the pub as a favorite, see rating/rate and get directions from your location to the pub. To mark it as a favorite you just have to press the star. To unfavorite it just press the star again. If you want to rate the pub, just click on one of the thumbs. Next to the thumbs you see how many who has given it a thumb up or down.

Another view you can access from the map is the list. In here you can sort the pubs either by distance, queue time or just show your favorites. To change sorting, just swipe right or left, or press the tabs located at the top.

Both from the map and the list you can search for a pub by pressing the magnifying glass.

On all the different views you can press the button with arrows to get the most recent info.
